ABSTRACT

FORMER TITLE : BALL-E

MODEL : SPHERE

We are familiar with the popular home assistant Alexa, Google Assistant, Siri etc.

What if these could do more and still be compact, flexible, light, fast and easily portable?

That is the idea we chose to share, a spherical shaped home assistant with many more facilities and functions than the three of'em mentioned above could handle together including voice, image recognition, and also can follow us like out pet and be multipurpose in action.

JOY

What Is JOY!

Knowing it better

Most Basically, it's something that rolls..

RESEMBLES BB-8

SINGLE KEYED DOMOTIC SYSTEM

APPLICATION OF IoT

ASSET FOR THE FUTURE SMART HOMES

PROGRAMMABLE MULTIPURPOSE SYSTEM

ACCESSABILITY AND CONNECTABILITY

DEIGNED TO BE PERFECT

The Internet of things (IoT) is the network of physical devices, vehicles, home appliances, and other items embedded with electronics, software, sensors, actuators, and connectivity which enables these things to connect, collect and exchange data.

BB-8 is an astromech droid that appears on Star Wars Episode VII - The Force Awakens. It has a ball shaped body and a domed head that resembles that of the R2 series droids, whose most popular unit is R2-D2. BB-8's body rolls independently from the head, which always stays near the vertical axis of the droid.

USER VIEW

KEEPING AN EYE ON THE ROLLIN'

Although fully automated, we can view the processes through our lap or smartphone which I connected to joy via internet.

The middle layer of the sphere has a 360 vision camera with 90% coverage of stills.

Commands could also be given via this device like : "Clean the floor at 8 AM", "Switch off the AC at 9PM", "Make an appointment at the saloon at 5PM" etc

It's voice recognition is similar to that of google assistant and alexa

The maximum number of devices that can be connected shall be upgraded as time says to.

PROS AND CONS

PROS

1. Light weight , compact, easily transportable
2. Manually Programmable for multipurpose
3. Runs on android, ios, windows platforms

Whole smart home configuration can be done at this single device

Secured network.. And the administrator retina/fingerprint recognized program rescheduling

Doesn't care about the power source.

CONS

1. Compact, hence complex in making and fixing
2. Large number of threads may cause time delays
3. Updating maybe somewhat long process as it should support different OS
4. May not roll efficiently on terrains (maybe upgraded)
5. Need support arms to climb stairs..

PHASE 1

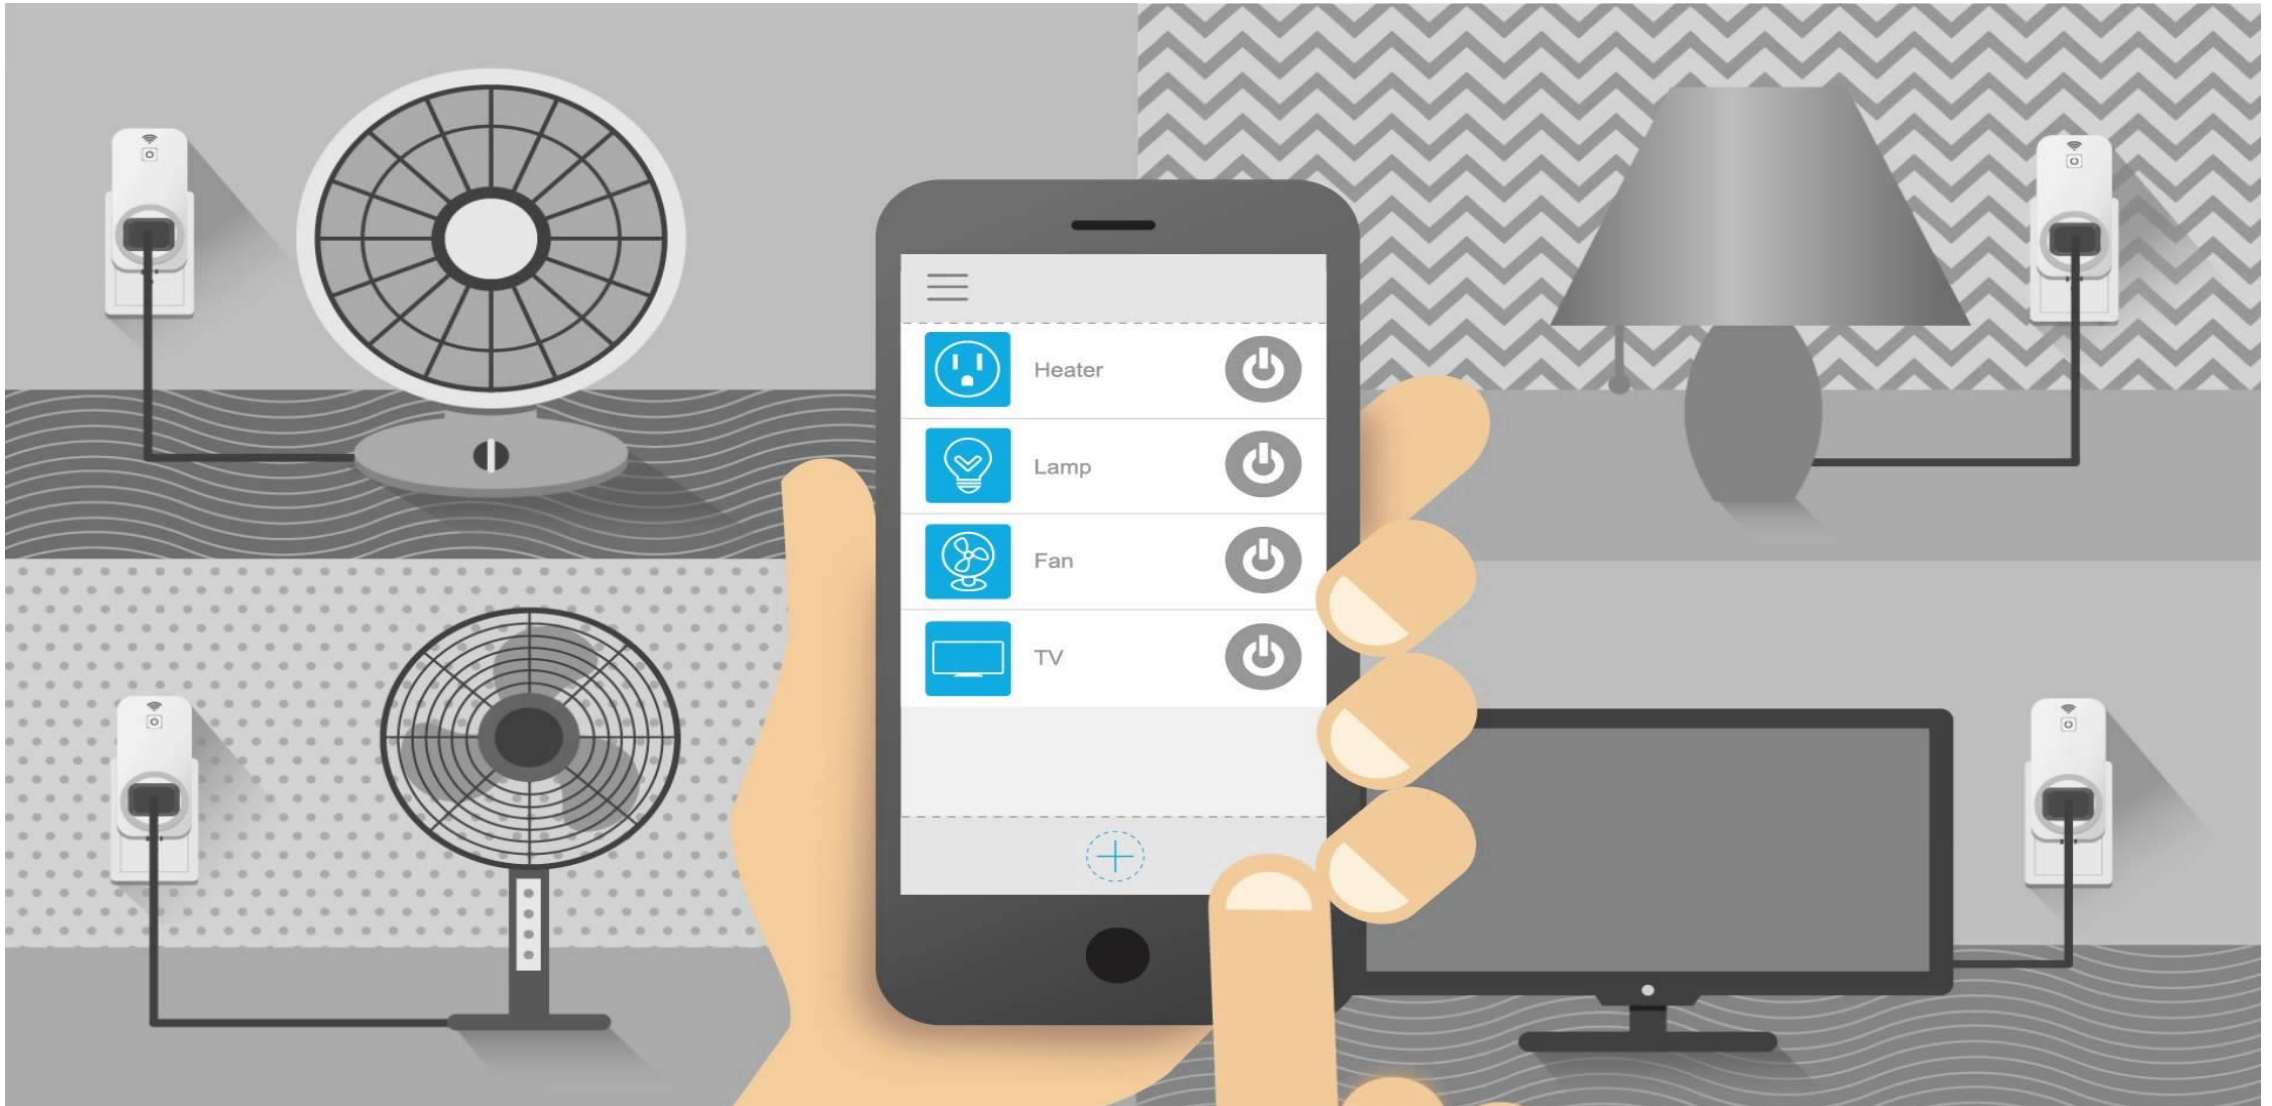

JOY 1.0

Just an alternative to other home assistants like Alexa.

The difference in the mode of operation is how it responds and the way it recognizes commands

PHASE 2

Controlling switch based electrical equipment using AI

PHASE 3

Guiding Vacuum cleaners using ML algorithm to find contaminants

PHASE X
